Summary

Java Full Stack Developer with **2.5 years of experience** in building scalable web applications using **Java, Spring Boot, Spring MVC, and RESTful APIs.** Proficient in frontend technologies such as **ReactJs**,**JQuery, JavaScript, HTML, and CSS**, with strong experience in databases including **Oracle, MongoDB and SQL Server**. Skilled in implementing secure authentication, business logic, and end-to-end application development within agile environments.

Technical Skills

- **Languages:** Java, SQL, JavaScript (ES5)
- **Frontend:** React.js**,** jQuery, HTML5, CSS3, AJAX
- **Backend:** Spring Boot, Spring MVC, Spring Security, REST APIs, JSP, Servlets
- **Databases:** Oracle, OracleSQL, SQL Server, MongoDB
- **Tools & DevOps:** Maven, Git, GitLab, Kafka ,CI /CD
- **Cloud:** AWS (EC2, S3, IAM, RDS– Basic)
- **Other:** JUnit, CI/CD, Agentic AI ,Gen AI ,Claude Code, Copilot

Professional Experience

Software Engineer 1
Cglia Solutions LLP – Hyderabad, Telangana
Feb 2024 – Present
Project: eProtocol (Laboratory Animal Research System – LARS)
Clients: Stanford University, Harvard University, University of Toronto, Washington University
Responsibilities & Contributions:

- Analysed customer requirements and application workflows to design and deliver scalable, maintainable software solutions.
- Developed and enhanced core features of the LARS product using Java, Spring MVC, Spring Boot, and RESTful APIs.
- Implemented Email Send Configuration supporting both immediate email delivery and scheduled email execution using cron jobs.
- Designed and implemented business rules in the service layer to ensure data integrity, validation, and application reliability.
- Developed and consumed RESTful web service client integrations for data exchange with external systems.
- Wrote and executed JUnit test cases to validate business logic, improve code coverage, and ensure application stability.
- Authored Requirement Specification Documents (RSD) and High-Level Design (HLD) documents for new features and enhancements.
- Performed code reviews to enforce coding standards, improve code quality, and follow best practices.
- Managed production log monitoring, debugging, performance tuning, bug fixing, testing, and client support.

Internship Experience

Java Development Intern
CodeClause – Pune, India
Sep 2023 – Oct 2023

- Developed a Time Conversion by Country application using Java.
- Built a Library Book Issue & Return Management System with core Java concepts.

Education

- **B.Tech in Computer Science and Engineering(CSE)**
  Gandhi Engineering College, Bhubaneswar, Odisha

Graduated: Apr 2024 | CGPA: 8.5

- President of the literary club-**Spuritha Club**.

Projects

1. **Vacation Planner-** Mar 2024 - May 2024

- Designed and developed a Spring MVC-based vacation planning portal for creating, updating, and deleting vacation plans based on user preferences such as number of days and location.
- Implemented a secure login feature using Spring Security, enabling user authentication and session management. Configured unique auto-generated user IDs to facilitate personalized vacation planning.
- Currently integrating a mail-sending feature using SMTP configuration to support both scheduled emails via schedulers and immediate email dispatch.
- Leveraged JDBC, JSP Pages, Servlets, and MySQL for robust backend functionality.
- Applied Bootstrap and CSS for responsive and user-friendly interfaces.
- **Technologies** :Java, Spring MVC, Spring Security, SMTP, Servlets, JSP, MySQL, Bootstrap, CSS

2. **Electric Vehicle Management System**:- JULY 2025 -Present

The Electric Vehicle Management System is a web-based application designed to help users find nearby electric vehicle charging stations and also connect buyers with electric charging infrastructure providers. The system works as a bridge between EV users, charger vendors, and EV infrastructure companies.

- **Module 1:** User Login & Charging Station Search
- Developed secure user registration and login with role-based access.
- Implemented location-based search to display nearby EV charging stations on an interactive map.
- Displayed real-time charger details such as location, availability, charger type, and vendor information.
- **Module 2:** Charging Station Setup & Vendor Management
- Designed dynamic forms for buyers/vendors to request new charging station setups, capturing requirements like charger capacity, power needs, budget, and installation timeline.
- Built vendor dashboards to view, manage, and respond to buyer requests, enabling smooth communication between buyers and infrastructure providers.
- **Technologies:** React, HTML5, CSS, JavaScript, Spring Boot, REST APIs, MySQL, Spring Security, GitHub Actions (CI/CD)

Certificates

- Java (Basic) – HackerRank
- Problem Solving (Basic & Intermediate) – HackerRank
- SQL (Advanced) – HackerRank
- 3-Star SQL Badge – HackerRank
